Following are the factors that should be considered for better and reliable solar power to fully power your home and enjoy the comfort of a one-time investment.

- **Type of Portable Solar panels**

Almost all the solar panels used commercially for homes are mono or multi-crystalline [solar panels](#). Both have a tiny difference between them, but they both get the required job done. It's better to focus on power outcomes and the price of the solar panel.

- **Size of solar panel Required**

Size varies differently according to the use. Try to work out how much electricity is being required by your home on a daily basis. And what time you need to electrify the most.

A small guess issued to most people who do not want to work their bill and figure out is that an average home uses 20kWh of energy per day. Keeping this figure in mind, a 5kW solar panel system is perfect for the house to fulfil its requirement of energy.

- **How many solar panels does one need?**

It should be understood that the power output matters more than the number of plates one should buy.

With the panel being power efficient, the small number of [Portable Solar panels](#) can generate a high quantity of power to power your home and maybe sell the free power as well.

HOW MANY SOLAR PANELS DOES ONE NEED?

Keeping the budget in mind, if your roof has more space might as well buy plenty of cheap yet less power-efficient solar panels to power your home. Using more of them will meet your daily needs as well.

Though the power panels can come in different sizes and shapes, do look out for compact and power-efficient solar panels around as well.

- **Cost of each solar Panel**

This is the main question and factor to look out for. Mostly the range can vary from country to country or region to region, but a best and good quality solar panel system.

These prices are currently the best price available for Portable Solar panels. With the increase in quality, the price might increase as well. So be ready to pay more than expected. Also, installments and components can cost much as well. With the increase in quality and ratio, the more it will increase in cost.

- **Money saved?**

This is the major point why you initially thought to switch from grid power to [solar panels](#) and pay all this much in a single installment.

Right off immediately, it may seem like a burden. But as the expert suggests, it takes almost five to seven-year for the solar panel to start paying back. Though the time is largely a single installment can have you save a lot of funds for a lot of things till your retirement or in later years, helping you save money in a given time. After the specific time allotted by an expert for payback for the installment of the solar panel. All the money will end up as your savings. Thus, a win-win for you and your family.

Payback time again varies from region to region and country to country. In Australia, the average payback time varies somewhere from 2 years to 6 years, depending on if you live in Adelaide or Darwin.

Yet it is to consider that all the pennies saved are the penny that you have earned After All after making the best choice.

- **Solar storage battery, if needed?**

The storage battery is essential as well. It can store extra charges for future use or use in time of need.

Mostly on cloudy or rainy days or weeks, battery storage can play a major role. They can store charge for later use.

In most homes, the storage battery has yet not proven to be economical, yet they are a viable option if you live somewhere, where it rains a lot or it even rains.

Quick facts to go through before buying the solar panel

- Always determine the panel according to your usage and budget
- North facing solar panel produce the maximum capacity of power, do look out of this that if your roof faces the correct direction
- Cut or remove any tree shade or wiring that might be shading your roof from getting maximum sunlight for the solar panel to produce energy
- With [Folding Solar Panels](#) becoming popular, it is better to look out for any legal advice or documentation from local administration to install Portable Solar panels.
- It's best to work out payback time according to a solar panel you buy.
- Always have the most efficient inverter installed for maximum power without any drop or loss.
- Understand the pros and cons of installing a battery with a solar panel system for better decision
- Get certificates of authenticity and guarantees from the buyer and installer for the solar panel system that you are installing in the future; it might either help you make on spot choice, or it will come in handy and save you a lot of money from going to

waste in near future if any problem occurs.

- Look out for brand reputation as well before considering their product.
- Always look for the certified company from local administration or from the state government
- Look out for reviews. Everyone will have a different experience, but most people will have the same experience related to one company. Look out for reviews as much as you can.
